The team conducted a thorough hazard identification process:

- Walkthrough inspections identified unsafe manual handling practices, such as lifting heavy boxes improperly.
- Machinery was inspected, revealing risks from unguarded moving parts.
- Employees reported near-misses involving forklift operations.

Risks were rated:

- Manual handling injuries: high severity, moderate likelihood.
- Machinery accidents: high severity, low likelihood but high impact.
- Forklift accidents: high severity, moderate likelihood.

3. Implementing Control Measures

Based on the assessments, several measures were implemented:

- Introduced mechanical aids such as trolleys and lifting devices to minimize manual handling.
- Conducted targeted training sessions on proper lifting techniques and machinery safety.
- Installed safety guards on machinery and improved signage.
- Established a hazard reporting system, encouraging employees to report unsafe conditions promptly.
- Developed a schedule for regular machinery maintenance.

4. Monitoring, Feedback, and Continuous Improvement

Over the following months, the project team:

- Conducted weekly safety audits focusing on manual handling and machinery safety.
- Monitored incident reports and near-misses, noting a 40% increase in hazard reporting, indicating improved safety awareness.
- Held monthly review meetings to discuss findings and adapt strategies.
- Recognized staff contributions to safety and shared success stories to foster engagement.

By the end of six months, the warehouse achieved:

- A 35% reduction in manual handling injuries.
